Final Project User Manual
COMP 4610 – GUI 1
Adam Gaudreau

Project Name – WIM (What I Make)

How to Install ——
No installation necessary. Assuming you have a folder containing the source files, just double click on the index.html file to open the application. Make sure you have an internet connection so the application can get the dependencies it needs. If you don't want to install it, check it out on WebLab:
http://www.cs.uml.edu/~agaudrea/461f2017/final/

How to Use ——
WIM is extremely straight forward to use. Once you land on the main page, you will be greeted and presented with the applications purpose.

1. Introduction
    a. There isn't much to do on this page but read up on WIM's goal. To proceed, either click Offer Info in the Navigation bar up top or hit the large Get Started button.
2. Offer Info
    a. Just like any form, go ahead and fill out the information that is requested. Only the first 4 fields are required.
    b. Don't worry if you mess up, WIM will let you know if it finds anything it can't work with.
    c. To proceed, click the Results button at the bottom of the page.
3. Results
    a. At the top, you'll see a close estimate of what you can expect from your paycheck every pay period.
    b. Just below that, you will see a Sankey diagram that visualizes where all your money goes for the whole year.
    c. Below that is the numerical data extracted from the diagram, just in case you wanted the whole numbers. You can also mouse over a path on the diagram to see the value.
    d. To continue, click the Projections button at the bottom of the page.
4. Projections
    a. Here, you can visualize how much money you will save, invest, and spend over several years to come.
    b. This will help put into perspective how much you can save and spend over the course of a year.

That's it! WIM is a very straight-forward application. You can switch between Offer Info, Results, and Projections at any time once all steps have been completed. The information will stay on the page until the browser refreshes it.
